

1. PEER ASSESSMENT FORM

Project Name:	COS80029 - TAP - XC 2 - Benchmarking LLM Safety Against Social Engineering Techniques		
Your Name:	Arun Ragavendhar Arunachalam Palaniyappan		
Your ID	104837257	Date	02/11/2025

Peer Assessment Form

The main purpose of this form is for all Team members to reflect on their interactions, but it may also be helpful in resolving disputes over the relative contributions of Team members.

Using the spread sheet **Self and Peer Assessment Form**

1. List the members of your Project Team
2. Enter a score between 0 and 5, for categories A to J for all members of the team (see Section 3 for definitions)

Winger-aunty, S. 1990. University of Wisconsin-Stout Modified by Pheroza Daruwalla and Ian Knowd, 1994.

Detailed Comments:

No.	Team Member Names	Comments
1	Arun Ragavendhar Arunachalam Palaniyappan	I led the technical backbone of the project. I designed and built the one-file R validation tool that checked schema, missingness, duplicates/near-duplicates, paraphrase overlaps, length outliers, and inter-/per-model agreement, and I used it to keep the dataset clean and auditable. I created a major portion of the full prompt set, pairing direct and paraphrased versions with clear screenshots and notes so anyone could follow the steps. I set up the GitHub organisation and final repository, structured folders, added teammates with the right roles, and wrote the plain-English user manual. I worked closely with Vikas on the Python analysis so our figures/tables could be regenerated on demand, and I supported Vaisakh on the LLM Judge so judge labels were observed safely alongside human labels. I also kept the team moving, booking rooms, answering questions, sharing small checklists, and unblocking issues quickly. If I could improve one thing, I would start light UI automation earlier to cut manual effort and improve repeatability.
2	Vaisakh Pariyacheri	Vaisakh set a strong technical and organisational tone for the team. He led the fine-tuning of the LLM Safety Judge end-to-end and coordinated planning, so decisions were made quickly and stuck. He contributed solid prompt work and collaborated with me and Vikas to align judge outputs with our human labels, which made the analysis more reliable. In meetings he kept discussions focused and translated feedback into clear next steps. A small improvement would be to draft a short “training notes” page earlier (final settings, data trims, checks) so new reviewers could follow the judge setup even faster.
3	Aarathi Narayanan Kadambatta	Aarathi was dependable, easy to coordinate with, and contributed across prompts and group deliverables. She supported the LLM Judge stream with testing and feedback, kept notes tidy, and met deadlines without fuss. Her steady input helped us keep the taxonomy and dataset aligned as we scaled. One area to refine would be adding quick mid-week check-ins on taxonomy alignment to reduce small rework at the end of a sprint. Overall, she was a positive and reliable teammate who made collaboration smooth.
4	Vikas Kadruvan	Vikas transformed raw data into clear, repeatable results. He developed the Python analysis notebook, produced the figures and evaluation tables we used in the report, and kept the code straightforward to rerun. He completed his share of prompts and paid attention to label rules, so our comparisons stayed fair. Vikas also helped review slides and tighten the final story for the client, making the delivery easier to follow. A minor improvement would be adding brief “how to run” notes at the top of each notebook/script to make hand-offs even faster.

Peer Review

5	Samsun Gulshan Sheik Dawood	Samsun contributed prompts and took on data analysis tasks that helped us finish the evaluation on time. She was responsive to review comments, kept to weekly goals, and helped check label consistency across models as the dataset grew. Her steady pace and clean follow-through reduced last-minute pressure on the team. To improve further, pushing interim commits with short notes during analysis would make it even easier for others to pick up mid-stream if needed.
6	Aayudh Himanshubhai Vaghani	Aayudh completed his prompt tasks on schedule and supported several group deliverables, including the poster. He assisted me on the R validation work when needed and was reliable in meeting prep and follow-ups. Communication was clear, and he stayed aligned with the two-week rhythm we agreed as a team. Looking ahead, building deeper involvement in the validation/analysis tools would increase cross-coverage and make his impact even broader.

2. Project/Client Review

Review the Project/Client experience below. Be critical but fair in your assessment

Questions	Yes/No
Client provided a clear vision for the students	Yes
Client was available to the students in the first week	Yes
Client is available for every meeting	Yes
You felt Client answers all students questions satisfactorily and clearly	Yes
You felt Client provides complete and clear requirements	Yes
The Client usually answers all the emails	Yes
The Client usually answers all the emails within a few days	Yes
The Client keeps changing the requirements	No
The Client communicates regularly	Yes
It is easy to communicate with the Client	Yes
The Client gives conflicting statements in different meetings	No
The Client provides constructive feedback	Yes
The Client provides (or helps in acquiring) all the required resources for the project (e.g. hardware, software, reading material etc.)	Partially Yes
Based on the outcome produced are the project expectations realistic for the first 12 weeks involvement?	Yes
I am finding it a good experience with the Client	Yes
Dealing with the Client is relatively easy	Yes
Issues with the Client are dealt with professionally	Yes
Any Additional Remarks!	
Working with CSIRO and Dr Chamikara was a very positive experience. The vision was clear from day one, meetings were on time, and questions were answered quickly and plainly. Feedback was specific and helpful, especially in keeping us focused on testing the real chat products and writing for a non-technical reader. Ethics and safety expectations were set early and reinforced throughout. The only minor gap behind our "Partially Yes" on resources was practical access (e.g., small cloud credits and sample data/accounts); a tiny pre-approved sandbox budget or temporary test accounts would make future student work faster. Overall, excellent client support, which was professional, responsive, and great to learn from.
