

Student Contribution Statement for Project Report

Team Number	XC2/WP1
Project Title	Benchmarking and Securing Language Models Against Adversarial Prompt Attacks
Facilitator Name	Dr. Xinyi Cai
Student Contribution	
Student Name	Vaisakh Pariyacheri
ID	104800822
My primary responsibility for this assignment was to manage the workflow and facilitate the successful compilation of this final report. My contributions involved several key stages: • Initial Planning: I initiated the process by developing a structural template for the report. This ensured all required sections were accounted for and provided a consistent framework for the team to follow. I then organized and led a dedicated meeting to discuss the report's scope and delegate ownership for each section based on individual project contributions. • Core Content: My primary written contributions are the Executive Summary and Section 4.0: Implementation. The Executive Summary required synthesizing the entire team's findings, from the benchmark creation to the final analysis, into a concise overview. Section 4.0 was my main authoring task, as it directly documents the technical work I led during the project: the iterative development, fine-tuning, and successful deployment of the Llama 3.1 LLM Safety Judge on Vertex AI. • Final Editing and Finalizing: I performed the final, end-to-end proofread of the entire document. This involved correcting grammar and spelling, spacing, etc. After this review, I finalized the document and managed the team's last verification before submission.	

Student Contribution Statement for Project Report

Student Name	Aarathi Narayanan Kadambatta
ID	104801951

I was responsible for one major section of the group report and contributed to the overall consistency and refinement of the final submission.

- **Section 3 – Design and Methodology.**

Authored the complete section explaining the project's design framework, including the proposed architecture, taxonomy development, the 600-Prompt Loop, and the Automated Safety Judge concept. Described the rationale for each phase, detailed the planned data flow, and documented key design revisions to ensure methodological clarity.

- **Whole report review and feedback.**

Reviewed the full document to ensure clarity, structure, and academic tone. Provided editorial and structural feedback to other team members to enhance consistency across sections and align the final report with professional academic standards.

Student Name	Arun Ragavendhar Arunachalam Palaniyappan
ID	104837257

Scope of work. I owned two core sections of the group delivery and supported final polish across the whole report.

- **Section 6 – Cloud Security Assessment.** Wrote and validated the cloud-security write-up for Vertex AI and OneDrive: clarified scope, checked who could access what, confirmed network exposure, encryption in transit/at rest, light logging, simple alerts, versioning/rollback, and retention; recorded risks and “next-step” hardening; compiled the evidence index.
- **Section 7 – Final deliverables & user manuals.** Created a new GitHub organisation, set up the project repository, pushed all artefacts, added teammates with the right roles, and enabled basic protections on main. Authored the end-to-end README (plain-English setup, R validator, Python analysis steps, repo map, troubleshooting). Verified every entry point and regenerated figures/tables to ensure they match the repo outputs.
- **Editing & quality pass.** Proofread and edited the full report: tightened structure, smoothed language, aligned terms (technique names, labels), checked that figures/tables match the data and notebook outputs, and fixed minor inconsistencies.

Student Contribution Statement for Project Report

Student Name	Samsun Gulshan Sheik Dawood
ID	105009251

I was responsible for one major section of the group report and contributed to the overall consistency, clarity, and refinement of the final submission.

- **Section 5 – Evaluation and Key Findings**
Authored the complete Evaluation section, analysing the cleaned dataset and interpreting empirical results across all three LLMs. This included assessing dataset quality, comparing direct and paraphrased attack success rates, and examining vulnerability patterns across different social-engineering techniques. All insights were presented using clear explanations supported by statistical evidence and visualisations.
- **Analytical visualisations and interpretation**
Generated a range of visual outputs including bar charts, heatmaps, pie charts, word clouds, and prompt-length distributions. These visualisations were used to identify behavioural trends, support the report’s claims, and explain why paraphrasing increases attack success.

Student Contribution Statement for Project Report

Student Name	Aayudh Himanshubhai Vaghani
ID	104996006
Section 1 – Introduction Authored the full Introduction section, structured into Problem Statement and Background, Objectives, and Scope. Developed a clear academic narrative connecting social-engineering psychology with AI safety. Defined project goals focused on benchmarking LLM guardrails and developing the LLM Safety Judge. Refined scope details to align with assessment criteria and maintained a consistent scholarly tone. Section 7: Conclusion Wrote the Conclusion summarising project achievements, including the successful completion of both core functionalities and key analytical findings on model vulnerabilities in Grok, Gemini, and GPT-5. Provided clear future directions for improving safety evaluation methods through multi-model frameworks and adaptive learning. Capstone Poster Design and Development Designed and produced the A2 Capstone Project Expo 2025 poster, transforming complex research results into a concise and visually engaging academic presentation. Managed layout, structure, and graphics to effectively communicate the research problem, dataset of 600 prompts, methodology, and key findings. Editing and Quality Assurance Reviewed and refined both the report and poster for consistency, accuracy, and clarity. Ensured alignment in terminology, figures, and tone while maintaining a professional and cohesive presentation across all deliverables.	

Student Contribution Statement for Project Report

Student Name	Vikas Kadruvan
ID	104981442

I was responsible for one major section of the group report and contributed to the overall consistency and refinement of the final submission.

- **2.0. Research and Related Work**
Authored the entire section that analysed the body of research on automated safety evaluation frameworks, jailbreak methods, and LLM safety. A thorough literature review was carried out, and two important scholarly works that served as the theoretical foundation for the project's classification of attack types and social engineering strategies were found. compiled knowledge from behavioural cybersecurity and natural language processing studies to describe how earlier research impacted the project's design, assessment approach, and emphasis on adversarial prompts that were paraphrased.
- **Whole report review and feedback.**
Helped to ensure clarity, consistency, and academic integrity by proofreading and editing the final group report.
