Portfolio Format and Assessment Criteria

Overview

Results in this unit are determined from a portfolio of work that you submit at the end of the unit. This is designed to help you achieve the best result possible, with lots of support to help you learn. This document outlines the portfolio assessment process, the format of the portfolio, and its assessment criteria.

Learning and Portfolio Assessment

Effective learning requires you to actively try to understand the topics being covered. The tasks that we provide you can help you develop your understanding, but do require you to think about how the tasks relate to the underlying concepts and practices. One way that we can assist you with this task is to provide you with feedback on your progress, and to answer your questions about aspects you are unsure of.

With portfolio assessment you have many opportunities to receive feedback. Each week you will have the opportunity to submit work to your tutor for feedback. They will look at your work and give you advice that you can use to improve your understanding, and the quality of the work you submit

in your final portfolio.

As shown in the image above, this process is iterative. Each week we will help you learn by introducing topics, working through tasks with you, providing resources and tasks you can complete (Deliver Unit). Using these resources you can develop your understanding. In this process you will create pieces of work that demonstrate your understanding. You can submit these to us so that we can help ensure that you have understood each topic correctly. The feedback we provide should then help you develop your understanding, while also providing us with ideas we can use to improve the way the unit is delivered.

At the end of the semester you can select your work to submit in your portfolio. Your grade is then determined from what you have submitted - which should have incorporated all of the feedback you have received throughout the teaching period.

Portfolio Format

In this unit the portfolio you submit needs to contain the following items:

1. A **Learning Summary Report** that reflects on what you have learnt, and shows how your portfolio addresses the unit's learning outcomes and its assessment criteria. You upload the Learning Summary Report **at the time you submit** the portfolio.
2. A number of **pieces of work** that provide evidence that you have met all of the unit's learning outcomes. As a minimum this will include:
 - a. Solutions to the weekly tasks, where only Pass tasks are mandatory; all tasks must be signed off as complete (graded "1" on Canvas) to be included in the portfolio.
 - b. A research report if you are aiming for High Distinction

Each of these is explained in the following sections.

Note that you do not have to include in your portfolio submission the tasks or pieces of work that have already been submitted on Canvas.

Learning Summary Report

Your *Learning Summary Report* will consist of two parts: a self-assessment and a reflection. The self-assessment indicates how your portfolio aligns with the assessment criteria from Table 1. Your reflection is a personal comment on what you have learnt in this unit, and how your knowledge and skills have developed.

A template has been provided to help you format your Learning Summary Report. You'll find it on the same page as this document on Canvas.

Research Report (for Distinction/High Distinction grades)

Distinction or High Distinction work is a project where you look into a problem or technology as prescribed on Canvas under the "Distinction/High Distinction Report" Assignment. You document the findings in a report which you submit to Canvas under Distinction/High Distinction Report.

Research Report	
Report requirement	The research report must: ▪ Aim to explore a question or topic related to the unit learning outcome. ▪ Project plan must be approved on Canvas ▪ Document the investigation conducted, including all details necessary for understanding the outcome. ▪ Present results or findings in detail as well as in a summary. ▪ Explain the reasons why this result was obtained, if applicable. ▪ Contain additional information with references if applicable.
Distinction / High Distinction Criteria	To qualify for a High Distinction, a report must: ▪ Be well structured with Introduction, main findings and conclusion or summary ▪ Contain all the requirements of a clear and concise report, as listed above ▪ Discuss actual hands-on work rather than a literature study ▪ Describe a substantial amount of work ▪ Be easy to understand to a reader with knowledge of the unit.

Assessment in Detail

The teaching staff will assess portfolios using the guidelines shown in the following figure. The process includes the following steps:

- Initially your portfolio will be compared with the grade criteria. Your work will then be assigned a grade from Fail through to High Distinction based on the criteria it meets. The self-assessment from your Learning Summary Report will be used to guide this process.
- Your portfolio will be assigned a (numeric) mark within the grade according to the details described in the table below. The table is a rough guide; marks will be adjusted up or down when individual contributors are above or below standard, e.g. you have an excellent learning summary when all other aspects have been completed satisfactorily and sort-of on time.

Fail Does not meet Pass standard. Pass Pass tasks are marked as Complete. Learning summary report submitted. Credit Passed, and all Credit tasks are Complete. Distinction Passed, all Credit tasks are Complete, D/HD plan approved, report has been submitted, interview attended, project at D level. High Distinction As under Distinction, but report of higher quality, i.e. substantial investigation documented. Report informative and understandable. High Distinction, plus a research report that demonstrates ability to conduct a small research project, analyse findings and make conclusions of a substantial or demanding project.	Portfolio not submitted, or One or more Pass tasks not signed off as Complete, or Fails to demonstrate coverage of all unit learning outcomes.				
	50 P All Learning outcomes covered, but Pass tasks very late or learning summary poor.	53 P Meets Pass, tasks on time, but poor reflections or learning summary.	55 P Meets Pass with acceptable reflections and learning summary, tasks on time.	57 P Meets Pass with good reflections and learning summary, tasks on time.	Learning Summary Report + Pass tasks
	60 C Meets Pass, but tasks poor or late, or learning summary poor.	63 C Meets Credit, but some issues with tasks, reflections, or learning summary.	65 C Meets Credit, with generally good tasks, reflections and learning summary.	67 C Meets Credit with good tasks, reflections and learning summary.	+ Credit tasks
	70 D Meets credit, but major flaws with D/HD project report, tasks late or learning summary poor.	73 D Meets Distinction, but some issues with the design or implementation, reflections or learning summary.	75 D Meets Distinction, with good design and implementation, reflections and learning summary.	77 D Meets Distinction, with well thought-through design and implementation, reflections and learning summary.	+ D/HD report + 15 min Interview
		83 HD Excellent outcomes, good discussion of investigation and details, but some weaknesses with report.	85 HD Excellent outcomes, discussion of investigation, good insights or comparison with alternative methods.	87 HD All outcomes are excellent with very high quality finish, including the discussion of alternatives.	+ Excellent quality
		93 HD All outcomes are excellent, research substantial and report with good insights or comparisons.	95 HD All outcomes are excellent, research substantial and report with excellent insights or comparisons.	97 HD All outcomes are excellent, including investigation method, report and analysis.	100 HD Something special. + Outstanding quality
